Kithara Software, specialist for PC-based real-time, has announced the "Student Edition" of the »RealTime Suite«, which will be available for universities and colleges for the coming winter semester of 2017. Including the complete functional range of the software library, this version allows for an easy introduction to the programming of real-time functions.

The Kithara »RealTime Suite« is not only frequently utilized in industrial fields but has also been widely involved in research and education for a long time now. As a consequence and due to high demand, the Student Edition will provide a free version of the real-time function library.

The utilization of "hard" real-time capabilities in academic software applications is becoming more and more widespread. The functions of the »RealTime Suite« allow for the implementation of guaranteed reaction times in sophisticated application fields such as robotics, laboratory automation or machine vision, without the need for high time and cost investments.

“For quite some time now, Kithara has observed how the »RealTime Suite« has become a link between research and industry regarding the usage of real-time capabilities. With the Student Edition we look to consolidate this relation in order to cooperate even closer with academic fields.”, Uwe Jesgarz, managing director of Kithara Software GmbH, explained.

The Student Edition can be run during the whole current semester on multiple computer workstations.

About Kithara Software GmbH

Kithara Software is a specialist for real-time solutions, especially for the Windows® operating systems family. The real-time extension RealTime Suite is a comprehensive system library for hardware-dependent programming, communication, automation and image processing in real-time. The software is an easy-to-use and powerful technical basis for advanced applications in robotics, image processing, measurement and control engineering as well as automation. It is the key element in machine building, for testing rigs and other specialized applications. Kithara Software has representations in the USA as well as China and supports global companies in their innovative projects.
